ADITYA JOSHI

Forward Deployed Founding Engineer · Mumbai, India · Open to relocation (US, UK, UAE)

joshionchain@gmail.com linkedin.com/in/joshionchain github.com/CodeMongerrr x.com/JoshiOnChain

SUMMARY

Founding engineer across **logistics, EV fleet telematics and crypto infrastructure**, building the backends, integrations and data pipelines they run on. Owns work end to end, from **system design and APIs to partner integrations, cloud deployment, security and production support**. Works directly with **founders, customers and partners** to turn operational problems into shipped software. Built **2 startup platforms from scratch**, ex-**Nethermind**, and shipped **Zcash core-node security fixes**. Ships **well-tested, documented, production-guarded PRs**, from CI gates and health checks to runbooks and differential test suites, and writes the design docs, cost briefs and verification reports behind key product and infrastructure decisions.

TECHNICAL SKILLS

LANGUAGES AND FRAMEWORKS

TypeScript | Python | Go | Rust | SQL | Solidity | Node.js | Fastify | React | Next.js | Apollo GraphQL

AI ENGINEERING

LLM agents | Tool calling | RAG | Vector search | MCP servers | Claude Agent SDK | Structured outputs | Guardrails

DISTRIBUTED SYSTEMS

Event-driven microservices | Kafka | Redis | PostgreSQL | BigQuery | Kubernetes | GCP | Terraform | CI/CD

WEB3 AND SECURITY

Ethereum | Smart contracts | DeFi | MEV | Zcash | Starknet | P2P networking | Application security | Tenant isolation

EXPERIENCE

BATTERYFLOW

Jun 2026 to present

Founding Engineer (Forward Deployed) · EV fleet platform · Remote

- Forward deployed founding engineer on an **EV fleet telematics platform**, owning the **fleet operator experience end to end**, from onboarding and partner integrations to live monitoring and reporting.
- Works across **backend services, streaming data pipelines and partner integrations**, and on the data quality that fleet-facing alerting depends on.
- Owns the delivery path for that work, from **schema and API design** through CI, deployment and production support.
- Project-level detail from this role is not published.

BHARATTRUCK

Jan to Aug 2026

Sole Founding Engineer · Freight marketplace · Remote

- Turned the founders' brief on **scale, cost, legal and tax compliance** into a live **freight marketplace** for shippers, carriers and drivers, owning **every layer from design to hosting**, from zero to its **first paid trip in 4 months**.
- Gave shippers quotes that cover the real cost of a trip, replacing flat pricing that underpriced fuel by **38%** with a 4-layer pricing engine, built in one day, that matches the fleet's own cost model to **0.5% median error**.
- Restored production delivery after 3 weeks of silent deploy failures by rebuilding CI/CD with health probes, then shipped **115 production deploys in 31 days** across 7 microservices, authoring 125 of the first 126 PRs.
- Protected shipper and carrier accounts before launch by closing **34 review findings in 2 weeks**, including open writes to the pricing tables behind every quote and reset tokens that worked as full logins.

GUSTO DEVELOPMENT

Sep 2025 to Jan 2026

Blockchain Developer (part-time) · Janction DEX on JASMY Chain · Japan (Remote)

- Custom-built **swap execution** for **Janction DEX**, a **Uniswap V3-style exchange**, around the client's **Japan-specific market requirements** that standard DEX logic could not handle, plus its Subgraph analytics.

NETHERMIND

May to Aug 2024

Research Intern · Ethereum and Starknet core infrastructure · London (Remote)

- Joined the core infrastructure team behind **one of Ethereum's leading execution clients** to work on **Juno**, Nethermind's Go full node for **Starknet**, across P2P networking, chain sync and the JSON-RPC API.
- Chased a P2P bug where Juno nodes **never rejoined peers after going offline** and briefed the core maintainers.

OPEN SOURCE

ZEBRA, THE ZCASH FOUNDATION'S RUST FULL NODE

Jul to Aug 2026

Rust, Bash · 4 merged PRs

- Wrote the **2 security fixes** in **Zebra v6.2.2**, full node of a **$26B+ privacy network**, with both merged in **31 hours**.
- Eliminated a shell-injection path in zebrad-log-filter by reproducing it with a crafted log line and rewriting the filter in pure Bash, so a malicious log line can no longer run commands on a node operator's machine (#11050).
- Stopped the Elasticsearch password leaking into the startup config dump with a RedactedString type (#11051).

PROJECTS

MEV SHIELD

Feb 2026

TypeScript, viem, Uniswap V2 AMM math, Flashbots, ENS

- Cut the modeled sandwich-attack loss on a **$660K (250 ETH) swap** from **$35.9K** to under $1K, a **97% reduction** for DeFi traders, by simulating the attacking bot on live Ethereum data and picking the cheapest safe route.
- Replays the attack in exact Uniswap V2 math and searches up to 1,100 public and private route splits per trade.

EDUCATION

INDIAN INSTITUTE OF TECHNOLOGY (ISM) DHANBAD

May 2026

Integrated Master of Technology · Dhanbad, India
